- **Profile**
- Adaptive Full-Stack, Mobile, and Cloud Developer and Computer Science graduate (B.Sc.) with 1 year of professional software engineering experience specializing in cloud architecture, real-time messaging, and multi-LLM AI integration. Expertise extends beyond agentic coding to advanced AI-assisted technical research, prompt engineering, output cross-verification, and multi-model consensus benchmarking (Claude, Gemini, ChatGPT, Grok). Proven track record of architecting event-driven systems, containerized workflows, and mobile application ecosystems while maintaining deterministic control over core system logic.
- **Technical Skills**
- **Mobile & Application Development:** Swift, SwiftUI, Xcode, Android Studio, Cross-Platform Application Development, In-App Integrations.
- **Languages & Frameworks:** Python, Node.js, TypeScript, Java, Swift, Go, Rego, C/C++, Bash, SQL.
- **Cloud, Containerization & CI/CD:** GCP (Pub/Sub, BigQuery, GCS), AWS (EC2, S3), Docker, GitHub Actions, CI/CD Pipelines (AWS, GCP), Firebase (Auth, Firestore, Realtime Database).
- **Databases & Data Formats:** BigQuery, Google Cloud Console DB, MongoDB (NoSQL), Protobuf, REST APIs, JSON, XML, SQL.
- **AI Research & Workflows:** Multi-LLM Verification & Fact-Checking (Claude, ChatGPT, Gemini, Grok), Agentic Systems (Cursor, Lovable), Prompt Engineering, Hallucination Auditing.
- **Security & Networking:** TCP/IP, Linux (Kali), Wireshark, OWASP Top 10, Vulnerability Assessment, Infrastructure as Code (IaC) Auditing.
- **Professional Experience**
- **Full-Stack & Mobile Developer | osApps | Oct 2025 – Present (1 Year)**
- **Real-Time Data Streaming & Cloud Architecture:** Transitioned core analytics pipelines from legacy ETL batch processing to high-throughput, event-driven GCP Pub/Sub architecture, streaming real-time user session events formatted via Protobuf and JSON to BigQuery, Google Cloud Console DBs, and GCS.
- **Containerized Deployment & CI/CD Pipelines:** Automated build, test, and deployment workflows using Docker, GitHub Actions, and CI/CD pipelines across AWS (EC2, S3) and GCP environments.
- **Cross-Platform REST API & Ingestion System:** Designed and implemented scalable REST APIs and backend services (Node.js/TypeScript, Python) integrated with SendGrid API, Apple App Store

API, and Google Play Console API to standardize customer feedback and data processing across platforms.

- **AI-Driven & Deterministic Analytics Engine:** Architected an AI-powered analytics system leveraging LLMs (Claude, Grok) strictly for text extraction, translation, and sentiment parsing, while isolating all computation, decision-making logic, and statistical evaluations entirely to in-house backend code to prevent AI bias and hallucination.
- **Multi-LLM Research & Verification Workflow:** Established research and validation protocols using an ensemble of AI models (Claude Sonnet/Opus, Gemini, ChatGPT, Grok) to cross-verify technical findings, audit codebase updates, and validate AI-generated insights prior to production deployment.
- **Developer–QA Bug Monitoring Application:** Engineered a dedicated QA management mobile application using Xcode and SwiftUI (iOS) alongside Android Studio tooling. Integrated Firebase (Firestore / Realtime Database) to maintain real-time state persistence, error tracking, and seamless bug monitoring between internal developers and the QA team.
- **Generative AI UI/UX Tooling:** Developed a "Studio System" integrating specialized media APIs for automated UI asset generation and compression pipelines.
- **Web Frontend & NoSQL Integration:** Deployed responsive web applications utilizing TypeScript and Node.js with NoSQL (MongoDB) databases, hosted on AWS EC2 infrastructure.
- **IT & Support Experience**
- **IT & Customer Support | Bank Leumi of Israel | Sep 2018 – Apr 2019**
- Provided Tier 1 technical support for internal banking systems under strict security protocols.
- Managed Active Directory permissions, ensuring least-privilege access compliance.
- **Computer Technician | Dr. PC | May 2019 – Mar 2020**
- Performed hardware/software diagnostics and OS patch management for Windows environments.
- **Cybersecurity & Technical Projects**
- **Self-Learned Security Researcher | 2024 – Present**
- **IaC Risk Detection Tool (Go & Rego):** Developed a security auditing tool to scan Infrastructure as Code files for unencrypted sub-resources and excessive permission configurations.
- **Prototype Pollution Research:** Demonstrated XSS and RCE vulnerabilities via server-side prototype pollution in Express/EJS Node.js environments.
- **CTF Competitions:** Active participant in picoCTF and TryHackMe focusing on binary exploitation and web application security.
- **Video Analysis Script (Python)**

- Built a computer vision pipeline using OpenCV and Tesseract for real-time motion detection and optical character recognition with fuzzy string matching.
- **Education**
- **The Open University of Israel | B.Sc. in Computer Science | Graduated Sep 2024**
- **Core Coursework:** Computer Architecture, Algorithms & Data Structures, Operating Systems, Network Security, Java Programming.
- **Languages**
- **Hebrew:** Native
- **English:** Advanced (Fluent written and spoken)
-
